CSS452 Internet of Things
Homework 5: Introduction to Raspberry Pi

1. Do the Example 1 in Lecture Note 8. Record a video to show
   - circuit connection,
   - Python code,
   - demonstration:
     - LED is alternatively turned on for 2 seconds and turned off for 2 seconds.

   Set the video name "Q1" and submit it to the Google Classroom.

2. Do the Example 3 in Lecture Note 8. Record a video to show
   - circuit connection,
   - Python code,
   - demonstration:
     - Input a value to adjust the LED intensity.

   Set the video name "Q2" and submit it to the Google Classroom.

3. Do the Example 4 in Lecture Note 8. Record a video to show
   - circuit connection,
   - Python code,
   - demonstration:
     - Pressing the switch, the LED is on.
     - Not pressing the switch, the LED is off.

   Set the video name "Q3" and submit it to the Google Classroom.

4. Do the Example 6 in Lecture Note 8. Record a video to show
   - circuit connection,
   - Python code,
   - demonstration:
     - Pressing the ON button, the LED is on.
     - Pressing the OFF button, the LED is off.

   Set the video name "Q4" and submit it to the Google Classroom.

5. Do the Example 8 in Lecture Note 8. Record a video to show
   - Python code,
   - The graph (showing random numbers) in ThingSpeak

   Set the video name "Q5" and submit it to the Google Classroom.
